What is expert[®]Atom?

It is a molecular engine additive that does not contain boron and heavy metals, developed with synthetic technology and reinforced with concentrated additives. expert[®]Atom fills and repairs the worn places inside the engine (especially the wear on the upper and lower parts of the cylinder). Particle sizes are in the range of 8-16 microns on average.

Increases engine performance

expert[®]Atom, which rejuvenates it by revising it by 95% without removing a single bolt from the engine and extends the life of the engine by protecting it again, won the best automotive product award of the year (Altın Zambak).

Prevents smoke

expert[®]Atom minimizes the blue smoke generated in the oil-burning vehicle by 95%. It prevents the release of soot and harmful gases from the exhaust to the nature.

Prevents engine vibration and irregular running

It prevents vibration and irregular operation caused by LPG usage, late and irregular maintenance, engine internal wear, careless use.

Reduces your engine bearing noise

The bearing gap makes noise in the vehicle's engine. expert[®]Atom fills these gaps and significantly reduces sound.

Inhibits fat burning and steam

expert[®]Atom prevents steam and oil burning in the engine by 90%.

Saves fuel

After using expert[®]Atom, it provides extra fuel savings as it supports the piston to work more efficiently and comfortably.

Increases engine compression

It prevents vibration and irregular operation caused by LPG usage, late and irregular maintenance, engine internal wear, careless use.

Repairs gaskets and seals

expert[®]Atom prevents oil leaks by softening and repairing hardened gaskets and seals.

Increases engine power

expert[®]Atom increases vehicle engine life, horsepower and compression. Increases in values can be monitored on the tester.

Extends the life of the oil

By increasing the resistance of the engine oil, it prevents premature deterioration and foaming of the oil. Longer km of oil. allows it to do.

expert® Atom is repair!

expert® Atom, produced with advanced technology and reinforced with concentrated performance additives, repairs the worn places and scratches in the engine by filling it with special particles in micron size.

By increasing the low compression values of the cylinders, it restores the lost power of the vehicle.

With the burning of oil, it cuts the smoke coming out of the exhaust and reduces it to the minimum level.

At high engine temperature, it provides extra resistance to the engine oil, prevents the oil from breaking down early and provides longer kilometers.

It is a strong polymeric compound so that engine

oil is not affected by temperature changes.

expert® Atom is added to engine oil, but it is definitely not an oil additive. It is completely different from other products due to its metal healing, fume cutting, preventing oil foaming, healing and preventing leaks in all hardened engine seals.

Highly effective on metal surfaces, cylinder walls and bearings.

It is recommended to be used every 20 thousand km for the highest level of protection in the engine.

It is recommended to be used every 20 thousand km for the highest level of protection in the engine.

Compatible with all mineral, semi-synthetic and fully synthetic oils.

How to use expert[®]Atom?

- 1 Before application, the vehicle's oil and oil the filter should definitely be changed.
- 2 To get full results, definitely into the old oil. Should not be added.
- 3 After changing the new oil and filter your vehicle's engine should be warmed up by starting it.
- 4 Atoms to the oil, the vehicle is idling. It should be run for 5-10 minutes.
- 5 If the vehicle is already emitting a lot of smoke, by giving gas to the vehicle, beforehand in the exhaust and in the catalytic converter, if any, old accumulated oil residues must be discarded.
- 6 If there is no technical fault in your vehicle, with expert[®]Atom, full results are inevitable.
- 7 Engine oil capacity up to 3-7 liters one box of Atom is sufficient for vehicles with for vehicles above this capacity, this rate should be taken into account.

When not to use expert[®]Atom?

- 1 In cases where the engine life is below 50%
- 2 On vehicles with a blown cylinder head gasket
- 3 Gray smoke from vehicle exhaust due to turbo failure if it comes out
- 4 In case of problems caused by injector problem, excessive smoke comes out of the exhaust
- 5 In malfunctions caused by valve tires
- 6 Producing very loud bearing noise due to excessive wear and in vehicles with high oil consumption
- 7 From the engine due to camshaft and crankshaft wear. **ABSOLUTELY NOT USED** in case of excessive sound!
